BULKMETER MAIN COMPONENTS

- The BM Series bulkmeters consist of three main assemblies: the manifold, body assembly and rotor assembly
- The higher rating of the larger meters is achieved by bolting two or three body capsules together and fitting double or triple rotor assemblies with a larger manifold to suit
- A calibrating mechanism and mechanical register are also attached to the front end cover
- The calibrating mechanism can be replaced by a front cover incorporating a pulse transmitter when required for electronic systems, such as MASTERLOAD II™ or MASTERLOAD III™ registers

ELECTRONIC REGISTER CALIBRATION

While conventional meters are calibrated at only one flow rate, MASTERLOAD II™ and MASTERLOAD III™ calibration is corrected at a range of flow rates to provide the highest level of accuracy. With a multitude of calibration points across the full flow range, the system allows the user the flexibility to configure each system to suit the requirements of their specific application.

MECHANICAL CALIBRATION

Calibration adjustment is stepless, with no necessary gear changing. All meters are tested at a range of flow rates before dispatch. Test certificates available upon request.

- Fluid used for testing: Odorless kerosene
- Specific gravity: at 60/60°F, 15/15°C = 0.8
- Viscosity at 60°F, 15°C = 2.4 centistokes.

PERFORMANCE AND PRESSURE DROP CALCULATIONS

PRESSURE DROP CHART (PSI)

VISCOUS PRODUCTS

Avery-Hardoll bulkmeters can be used on all petroleum products of all viscosities. However, there is an increase in pressure drop with more viscous fuels, which under normal circumstances will limit the maximum flow rate obtainable.

It is recommended that the pressure drop through a bulkmeter should not exceed 15 psi (1 bar), above which the load on the bearings will start to cause wear.

Consequently when using products with viscosities above 100 centistokes (at operating conditions), it is necessary to reduce the maximum permitted flow rate. As a guide, it is suggested that the pressure drop through the meter should not exceed 10 psi (0.7 bar) for continuous running at maximum speed or 15 psi (1 bar) for continuous running at half speed.

The low pressure drop for the BM Series of Avery-Hardoll bulkmeters is displayed on the left.
